

What is claimed is:

*Subs  
A1*

1. A device for the fixation of dimensionally stable suitcases in a cargo space of a motor vehicle, wherein, in a cargo space floor (3), receiving tracks (4) are provided, which are associated with securing means (5) for the suitcases (6), wherein corresponding securing elements (10), which can be engaged with positive lock with the securing means (5) in the cargo space, are provided on the suitcases (6), and wherein actuation means (7, 8, 9) are provided for the manual separation of the securing means (5) and the securing elements (10) from each other, and arranged in the cargo space or on the suitcase.
2. The device according to Claim 1, wherein the positive locking connection between the securing means (5), the securing elements (10) and the receiving tracks (4) are arranged at the height of application of vehicle crash stresses.
3. The device according to Claim 1, wherein the securing elements (10) are positioned on the bottom side of each suitcase.
4. The device according to Claim 1, wherein the receiving tracks (4) are lowered into the cargo space floor (3) and rigidly anchored as a result of the construction itself.
5. The device according to Claim 1, wherein the actuation means present a manually operated rotating element (7), which, via a transfer mechanism (8), moves the securing elements (10) or the securing means to the open or the stopped position.
